

## SMART-PACK LABELING SYSTEM

Moving can be a stressful and time consuming process so we recommend that you start by setting a plan prior to your move by organizing the loading and unloading of your items. This will decrease damages and injury as well as save time and money. This labeling system is great for more efficient use of your time when moving.

Simply follow the instructions below!

**Tip:** Do not apply labels on walls, furniture finishes or surfaces that may crack or peel. Apply labels to the back of the furniture instead

### STEP 1: LABELING

Our labels are designed to identify different rooms in your home where each package belongs. (ie: Living Room, Kitchen, Bathroom, Bedroom... etc.) Place the labels on the front center of each box. This will help make your packing and moving process more efficient.

### STEP 2: PACKING

We would like to suggest that you pack your items one room at a time to keep all items from each room together. Place the boxes against a wall with labels facing the front. This will facilitate your loading and unpacking.

### STEP 3: LOADING

When loading your vehicle, we recommend that you load room by room to keep all items from the same room together. Also, start with larger/heavier boxes and finish with smaller/lighter ones to save space and minimize the chance of damage to your belongings.

### STEP 4: UNLOADING

Before unloading anything, it would be helpful to place a label on the door of each room in your new home. It will make it much easier to identify where each box should go without wasting time.
